

## HOW TO SETUP UPDATE INTERVAL in Feedreader

- 1) Open Feedreader,
- 2) Select related feed, for example “Macau Severe Weather Information”,
- 3) Right Click on the feed and select “Edit feed”:

- 4) Select “Update period”:

A screenshot of the "Edit 'weather Forecast'" dialog box. The dialog has a blue header and a light gray body. It contains several input fields and dropdown menus: "Feed name" (text: "weather Forecast"), "URL" (text: "http://rss.smg.gov.mo/c\_WForecast.xml"), "Username" (empty), "Password" (empty), "Archive size" (dropdown: "Default"), "Update period" (dropdown: "Intellupdate"), and "Update priority" (dropdown: "Normal"). There is a checked checkbox for "Open article link automatically". At the bottom, there are buttons for "Delete feed", "Save", "Cancel", and "Update feed". The "Last update" field shows "12:12 23/03/09" and the "Next update" field shows "12:57 23/03/09". The "Status" field shows a yellow warning icon.

5) Choose the option you prefer “FeedReader” to check for update of this feed:

Edit "weather Forecast"	
Feed name	<input type="text" value="weather Forecast"/>
URL	<input type="text" value="http://rss.smg.gov.mo/c_WForecast.xml"/>
Username	<input type="text"/>
Password	<input type="password"/>
Archive size	<input type="text" value="Default"/>
Update period	<input type="text" value="Intelliupdate"/>
Update priority	<ul style="list-style-type: none"><li>Intelliupdate</li><li>1 minute</li><li>2 minutes</li><li>5 minutes</li><li>10 minutes</li><li>15 minutes</li><li>20 minutes</li><li>30 minutes</li><li>45 minutes</li><li>1 hour</li><li>2 hours</li><li>6 hours</li><li>12 hours</li><li>1 day</li><li>2 days</li><li>7 days</li><li>Manual update</li></ul>
Last update	
Next update	
Status	

Remark: For SMG’s Warning Message, we recommend to set feeds to be about 5 minutes, for other weather information like Weather forecast, Actual weather etc., the update interval should be longer.
